

Inexpensive integration of second radar with RADARserver LE

Multi radar

Network solution with RADARpilot720°

RADARserver Light Edition

RADARserver LE acquires image data of a second radar scanner on board. Via network connection, the image data are transferred to **RADARpilot720°**. **RADARpilot720°** integrates them for display together with the image of the first radar scanner.

The system works utterly quiet on a state-of-the-art industrial PC without wear parts as there are rotating hard disk or fan.

Compact dimensions (22 x 9 x 27 cm) of **RADARserver LE** allow trouble free installation in the wheelhouse. Either on-board power supply (24V DC) or standard AC power supply (230V AC) is possible.

- ▶ Direct switch between display of bow and stern radar
- ▶ Clear radar image all around the vessel
- ▶ No shadowing anymore in case of high cargo

A product of innovative navigation
